ias says there are five problem areas in the relat of code 3 vehicles and chicles on roadways that touched on in his video.

e first one is simple. The quires motorists in both pull over to the right and

paramedic Craig Lidays the main reason for that code 3 vehicles are d to travel in the left lane of that lane clear to rush mergency.

need to stop because the vehicle may need to make or left turn on a intersectget, a side street or drive-

Dave Thomas

way. Motorists who only pull over, but don't stop could cause a collision or slow a turning code 3 vehicle down.

2. Thomas says motorists are also legally responsible to safely yield to code 3 vehicles.

"What to do at a red light? They (motorists) don't know what to do at a red light." says Thomas. In this area, he notices the most confusion.

They sit in front of you. You're honking your horn, your siren is screaming and your lights are flashing. They don't want to blow the red light their stopped at.

If you've go a child in the back that is dying and maybe the emergency room's staff and equipment might save them, it's hard to be patient behind that car in front of you." Thomas admitted in these instances he has been discourteous and yelled at such motorists.

Thomas suggests at a red light the vehicle in the left lane blocking the path of a code 3 vehicle should make sure the intersection is clear and then cautiously pull into the intersection and turn right and then pull over and stop.

3. What to do when you are traveling on a roadway and an approaching emergency vehicle on an intersecting street is going to cross your street in front of you? "Do you lock and skid or do you put the pedal to the metal and look like you didn't see us?" Thomas wryly asks. "We suggest that if you can make a stop

safely then stop and let us cross in front of you. If you can't make a safe stop go through.

4. "Don't go through a fire or emergency scene and rubber neck us it causes congestion and adds to the problem.

5. "Don't follow us to a fire or other emergency. As soon as our firefighters arrive at a scene they may be jumping off a truck from all sides and we don't want a motorist who follows us to pass and hit one of us."

Thomas says another reason for

not following is because there is often other emergency vehicles rushing to the same emergency and a tailing motorist may impede them. Some emergency vehicles may join code 3 vehicles from side streets.

"I remember a run to Salt Lake City we had at 70 mph and a we had a vehicle following us most the way. I guess he thought he get to Salt Lake faster sneaking behind us." Don't try it, he warns. "Anytime we see this we radio the highway patrol."
